In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of the final rejection. Examiner Note: If box 1 is checked, check either box (a) or (b). ONLY CHECK BOX (b) WHEN THE FIRST REPLY WAS FILED WITHIN TWO MONTHS OF THE FINAL REJECTION. See MPEP 706.07(f). Extensions of time may be obtained under 37 CFR 1.136(a). The date on which the petition under 37 CFR 1.136(a) and the appropriate extension fee have been filed is the date for purposes of determining the period of extension and the corresponding amount of the fee. The appropriate extension fee under 37 CFR 1.17(a) is calculated from: (1) the expiration date of the shortened statutory period for reply originally set in the final Office action; or (2) as set forth in (b) above, if checked. Any reply received by the Office later than three months after the mailing date of the final rejection, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). SUPERVISORY PATENT EXAMINER
**ECHNOLOGY CENTER 2100

Continuation of 11. does NOT place the application in condition for allowance because: Applicant amendment filed on 6/7/07 has been condidered but they are not persuasive:

Applicant argured in substance that:

- (1) "there is no teaching therein of a system wherein multiple processors are cooperating to execute a single application".
- (2) " there is not script which contains a map of sequences that will occur during the execution of at least one task in the multi-processor environment".
- (3) "there is not script stored on a dedicated processor".
- (4) "there is no suggestion that Pitot could properly combine the Hvostov".

Examiner respectfully disagreed with Applicant's remarks:

As to point (1), multiple processors are cooperating to execute a single applicalition is not disclose in claim language.

As to point (2), Hvostov teaches script (a service flow description) which contains a map of sequences that will occur during the execution of at least one task (flow description specifying the link resources required to support each user of the ONU and the flow description is activated either during the regestration process or periodically on demand, paragraph 24) in the multi-processor evironment (one or more algorithm processors, paragraph 7, lines 64-67).

As to point (3), the sript stored on dedicated processor is not descrised in claim language.

As to point (4) In response to applicant's argue that there is no suggestion that Pitot could properly combine to the Hvostov, since they address different objects in different ways. See In re fine, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and In re Jones, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, both Hvostov and Pitot teach controlling allocating resources. Thus, It would have been obvious to a person of ordinary skilled in the art at the time of the invention to apply the teaching of a resources are memory and matrix configuration as taught by Pitot to the invention of Hvostos because this allows dynamic allocation of memory locations as and when required so that the memory resource is optimized.
